JumpStart XL is shown to promote early vigour, greater stress tolerance, earlier and more even maturity and higher yield potential by increasing the availability of phosphate to the plant. In 75 independent large-plot research trials, crops treated with JumpStart averaged 7% higher yields than untreated.*

*Results from Western Canada from 1995-2017. Performance may vary from location to location and from year to year, as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the grower's fields.
